### Section 11

## National Defense and Veterans Affairs

This section presents statistics on national defense and its human and financial costs; military personnel, ships, and aircraft; Selective Service operations; and various federally sponsored programs and benefits for veterans. The principal sources of these data are the annual Selected Manpower Statistics and other reports issued by the Office of the Secretary of Defense; annual reports of the Departments of the Army, Navy, and Air Force, the Office of Civil Defense, and the National Guard Bureau; the Selective Service System; Annual Report of Administrator of Veterans Affairs, Veterans Administration; and Budget of the United States Government, Office of Management and Budget. Data on veterans also appear in reports of the Census of Population, conducted by the Bureau of the Census.

Department of Defense (DOD).—DOD provides for the security of the United States. It is the successor agency to the National Military Establishment and was established as an executive department by the National Security Act Amendments of 1949. DOD includes the Office of the Secretary of Defense, the Joint Chiefs of Staff, the military departments (Army, Navy, Air Force), and the unified and specified commands. The Secretary of Defense is the principal assistant to the President in all matters relating to DOD. He is appointed from civil life by the President with the approval of the U.S. Senate. The chain of command runs from the President to the Secretary of Defense and through the Joint Chiefs of Staff to the commanders of unified and specified commands.

The Joint Chiefs of Staff are the principal military advisers to the Secretary of Defense as well as the President and the National Security Council. Each member of the Joint Chiefs of Staff, other than the chairman, is the senior military officer of his respective service and is responsible for keeping the Secretary of his military department fully informed on matters considered or acted upon by the Joint Chiefs of Staff.

Each military department is separately organized under its own Secretary who is responsible to the Secretary of Defense for the operation of his department. Commanders of unified and specified commands are responsible to the President and the Secretary of Defense for the accomplishments of the military missions assigned to them.

Selective Service.—The Selective Service System is responsible for the registration, classification, selection, forwarding for examination, and delivery for induction into the Armed Forces of all men required to register under the Military Selective Service Act. The act, prior to July 1, 1973, required men to register at age 18 and to be liable for military service up to age 26 or, if they have been deferred from service, up to age 35. After July 1, 1973, generally, only registrants who had received deferments and the basis for the deferments had ceased to exist are liable for induction. Such persons are liable for induction until age 35. The authority to induct doctors and allied medical specialists expired July 1, 1973. Selective Service is also authorized to determine availability of members of the Standby Reserve of the Armed Forces for order to active duty in time of war or national emergency.

Military reserves.—Reserve personnel of the Armed Forces consist of the Army National Guard, Army Reserve, Naval Reserve, Marine Corps Reserve, Air National Guard, Air Force Reserve, and Coast Guard Reserve. They provide trained personnel available for active duty in the Armed Forces in time of war or national emergency and at such other times as required by the national security.

The National Guard has dual Federal-State responsibilities and uses jointly provided equipment, facilities, and budget support. In peacetime, the National Guard is State-administered, under command of the State Governors. The President is also empowered to mobilize the National Guard and to use such of the Armed Forces as he considers necessary to quell insurrection in any State against its government, to enforce Federal authority in any State, and to suppress interference with the execution of State and Federal law in a State by insurrection, violence, or conspiracy.

Veterans Administration.—The Veterans Administration administers laws authorizing benefits for eligible former and present members of the Armed Forces, and for the beneficiaries of deceased former members. Veterans benefits available under various acts of Congress include: Compensation for service-connected disability or death; pensions for nonservice-connected disability or death; vocational rehabilitation for service-connected disability; education and training; guaranty or insurance of home, farm, and business loans; U.S. Government and National Service Life Insurance; hospitalization; domiciliary care; nursing home care; out-patient medical and dental care for service-connected disability; prosthetic and other appliances; special housing and automobiles or other conveyances for certain disabled veterans; burial allowances; and educational assistance to wives, widows, sons, and daughters of deceased or totally disabled veterans, servicemen missing in action or prisoners of war.

Estimates of veterans in civil life as published by the Veterans Administration generally cover all persons with war service or service between January 31, 1955, and August 5, 1964, and include those living outside the United States. Similar data from the Bureau of the Census relate to civilian males, 14 years old and over, who live in the United States and who have served in the Armed Forces, whether in war or peacetime.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to Historical Statistics of the United States, Colonial Times to 1957. See preface.

### No. 488. Federal Budget Outlays for National Defense and Veterans Benefits and Services: 1950 to 1974

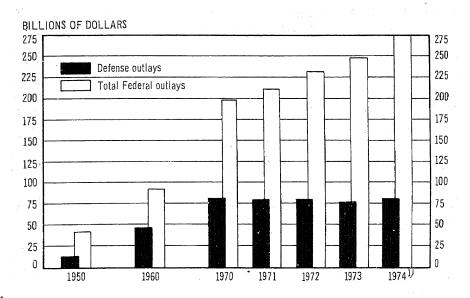

[In billions of dollars, except percent. For years ending June 30. Includes outlays of Department of Defense, Veterans Administration, and other agencies for activities primarily related to national defense and veterans programs. See *Historical Statistics*, Colonial Times to 1967, series Y 357–358 and Y 360, for related data]

1 Based on expenditures of Departments of the Army and Navy to World War I and major national security expenditures thereafter. Usually the figures begin with the year the war began but in all eases they extend one year beyond the end of the actual conflict. See Historical Statistics of the United States, Colonial Times to 1967, series Y 351-352 and Y 358.

2 To World War I, estimates are based on Veterans Administration data. For World War I, World War II, and Korean conflict, estimates are those of the 1956 report of the President's Commission on Veterans' Pensions plus 25 percent (the Increase in the average value of benefits since the Commission made its report).

3 Source: U.S. Veterans Administration, Annual Report of Administrator of Veterans Affairs.

4 Estimates based on assumption that war would end by June 30, 1970 (except for original war costs and for veterans benefit costs to 1974).

veterans benefit costs to 1974)

veterans beneut costs to 19/4).

§ Estimated Department of Defense expenditure in support of Southeast Asia for fiscal year 1965 to 1972.

§ Medium-level estimate of 200 percent (high, 300; low, 100) based on figures expressing relationship of veterans' benefits payments to original costs of other major U.S. wars.

§ Medium-level estimate of 20 percent (high, 30; low, 10) based on figures showing interest payments on war loans as percentage of original costs of other major U.S. wars.

<sup>&</sup>lt;sup>1</sup> Includes all direct employment by U.S. Government abroad regardless of citizenship. In June 1973, overseas employment was 135,000 (Dept. of Defense, 79,000) of whom more than sixty-two percent were foreign nationals. <sup>2</sup> Atomic Energy Commission, Selective Service System, and Office of Emergency Preparedness.

<sup>-</sup> Represents zero.

1 Military awards for supplies, services, and construction. Net value of contracts of \$10,000 or more for work in each State and the District of Columbia (see also "Undistributed"). Figures reflect impact of prime-contracting on State distribution of defense work. Often the State in which a prime contractor is located is not the State in which the subcontracted work is done. See also headnote, table 49.

2 Includes contracts of less than \$10,000, all contracts awarded for work in the U.S. possessions, the Commonwealth of Puerto Rico, the Trust Territories of the Pacific, and other areas subject to complete sovereignty of U.S.,

### Section 12

## Labor Force, Employment, and Earnings

This section presents statistics dealing with the characteristics of the economically active segment of the population, the labor force; its distribution by occupation and industry affiliation; and the supply of, demand for, and conditions of labor.

The chief sources of these data are the census of population conducted by the Bureau of the Census (see text, p. 1); the monthly *Employment and Barnings* and *Monthly Labor Review*, issued by the Bureau of Labor Statistics (BLS); and *Farm Labor*, issued monthly by the Statistical Reporting Service (SRS), Department of Agriculture.

Types of data.—Statistics on the labor force, employment status, and jobs shown in this section are derived from two bodies of data. Each measures a different aspect of employment. Data based on household interviews conducted by the Bureau of the Census in the census of population and the Current Population Survey (see below) present information on employment status obtained from workers or members of their households. Each employed worker is counted only once, even though he may have held more than one job during a given period.

Data based on establishment reports are used in BLS industry surveys and in SRS surveys. Workers are counted each time they appear on a payroll during the same period. While population characteristics are obtained only from the household survey, detailed data on wages, hours worked, and labor turnover are more readily obtained from establishment reports.

The census of population provides detailed data for the United States and for each State, standard metropolitan statistical area, county, city, and other area. The data include personal characteristics (sex, age, race, etc.) of persons employed and unemployed, the numbers reported in each occupation and industry, and other items. Monthly data from the Current Population Survey, are published by BLS in *Employment and Earnings* and related publications. Data presented include national totals, by sex, race, and age, of the number of persons in the civilian labor force; the number employed, in nonagricultural industries and in agriculture, along with data on hours of work and occupational groups; the number unemployed and duration of unemployment; and the number of nonworkers, their work experience, and jobseeking intentions.

Employment and Earnings also presents monthly data from establishment surveys on nonagricultural employment, labor turnover, and hours worked. These data are shown for broad groupings in the BLS Monthly Labor Review, which also presents statistics on wage rates, industrial relations, and output per man-hour. Certain of these data are shown for States and most standard metropolitan statistical areas (see sec. 34). Historical statistics, in geographic detail, are shown in the BLS Bulletin No. 1370-9, Employment and Earnings, States and Areas, 1939-71.

Current Population Survey.—Monthly data on the labor force are collected and compiled for BLS as a part of the Current Population Survey, a nationwide sample survey conducted by the Bureau of the Census. (See text, p. 1.) A detailed discussion of the survey and its methodology appears in Concepts and Methods Used in Manpower Statistics From the Current Population Survey (Report No. 313), available on request from BLS. Because the data are derived from a probability sample, they may differ from the figures that would have been obtained if it were possible to take a complete census using the same questionnaire and procedures. Thus, the data are subject to some degree of sampling error which must be taken into account in evaluating changes in the data. According to current computations, the relative sampling error for summary estimates such as civilian labor force, total employment, and nonagricultural employ-

ment is about 0.3 percent; for agricultural employment and for unemployment, it is roughly 2 to 4 percent. The chances are about 2 out of 3 that an estimate from the sample would differ from a complete census by less than the percentage estimated above for the particular item. The chances are about 19 out of 20 that the difference would be less than twice the specified percentage and about 99 out of 100 that it would be less than 2½ times the percentage. This sampling variability is illustrative of the variability of data based on the Current Population Survey. For further details, see the explanatory notes in the BLS Employment and Earnings.

Statistics obtained from the Current Population Survey may differ from decennial census data because of sampling variability as well as differences in the enumeration process and procedures. For further information, see *U.S. Census of Population:* 1970, vol. I.

Labor force.—Effective in January 1967, the lower limit for official statistics on the labor force was raised from 14 to 16 years of age. Data on employment status, collected each month in the Current Population Survey, relate to activity or status during the calendar week which includes the 12th of the month. Annual figures shown here are 12-month averages.

The civilian labor force comprises all civilians classified as employed or unemployed according to the criteria below; the "total labor force" also includes the Armed Forces. Employed persons comprise (a) all civilians who, during the survey week, did any work for pay or profit (minimum of an hour's work) or worked 15 hours or more as unpaid workers in a family enterprise, and (b) all persons who were not working but who had jobs or businesses from which they were temporarily absent for noneconomic reasons (illness, bad weather, vacation, labor-management dispute, etc.). Unemployed persons comprise all persons not working during the survey week who made specific efforts to find a job within the previous 4 weeks, (such as applying directly to an employer, or to a public employment service, or checking with friends) and who were available for work during the survey week (except for temporary illness). Persons on layoff from a job or waiting to report to a new job within 30 days are also classified as unemployed. All other persons, 16 years old and over, are "not in the labor force."

Changes in methods of measuring employment and unemployment were also introduced in January 1967. They have clarified underlying concepts but have not substantially altered the statistics. A detailed discussion of the changes and their effect on the various series appears in the February 1967 Employment and Earnings and Monthly Report on the Labor Force.

Beginning in 1972, information from the 1970 Census of Population was introduced into estimation procedures, producing increases in the civilian noninstitutional population, labor force, and employment totals, but having essentially no effect on unemployment levels and rates. A subsequent population adjustment, introduced in March 1973, affected the statistics by race but had little effect on totals or rates. Further changes in labor force statistics derive from a comprehensive revision in classification of occupations and industries for the 1970 census, and from inclusion of a question on major activities or duties in the December 1971 Survey. As a result, meaningful comparisons of occupational employment levels cannot be made between 1971–72 and prior periods nor between those 2 years. For further explanation of the changes, see the February 1971 and 1972 issues of *Employment and Earnings*.

Employment and earnings.—The monthly estimates and annual averages of non-agricultural employment prepared by BLS are based on voluntary reports from establishments which, in March 1971, employed 11 million manufacturing workers (61 percent of total manufacturing employment at that time), 10 million workers in nonmanufacturing industries except government (26 percent of the total in nonmanufacturing industries), and 8 million Federal, State, and local government employees (60 percent of the total in government). These reports are supplemented by data from other government agencies and adjusted at intervals to data from tabulations of reports under government social insurance programs. The monthly estimates exclude

persons not normally on establishment payrolls, such as proprietors of unincorporated businesses, self-employed persons, domestic servants, unpaid family workers, agricul-cultural workers, and the Armed Forces. The employment data are for all employees, both full- and part-time, who received pay for any part of the period reported.

Estimates are available on a continuous basis from 1919 for total nonfarm payroll employment and the 8 major industry divisions. Estimates for other periods are available for several hundred selected industries. Both total employment and production-worker estimates are published for 21 major manufacturing groups, 277 manufacturing subgroups, and 11 mining industries. Also, estimates for nonsupervisory workers are published at broad levels and in varying detail for wholesale and retail trade, transportation, public utilities, finance, insurance, real estate, and services; estimates for construction workers are published for the contract construction industries; and 402 series are published for the employment of women.

Average weekly hours and average weekly and hourly earnings are available for over 360 series covering production and related workers in manufacturing and mining, construction workers in contract construction, and nonsupervisory workers in other selected nonmanufacturing industries. The earnings data are gross (before payroll deductions) and include overtime premiums; they exclude irregular bonuses and value of payments in kind. Hours are those for which pay was received.

Agricultural employment estimates and wage rates, obtained by means of monthly mail returns, have been issued since 1909 by the Department of Agriculture and appear monthly in Farm Labor. Annual estimates of persons 14 years old and over who did farm work for cash wages at any time during the year are published in The Hired Farm Working Force. Also reported are days employed, earnings from farm and nonfarm work, personal characteristics of hired farm workers and other pertinent information. These estimates are derived from a survey conducted once a year under contract by the Bureau of the Census for the Economic Research Service.

Output per man-hour.—BLS publishes annual measures of output per man-hour according to two broad concepts. The first, physical output per man-hour, deals with the relationship between production in physical units and man-hours used in production; the second, net output per man-hour, with the relationship between value added (at fixed prices) and man-hours. Both indexes measure the relationship between production and one factor of input—labor time. They do not measure the specific contribution of labor or capital nor the increased efficiency resulting from changes in technology or production procedures.

The indexes of output per man-hour for selected industries are based on the physical output per man-hour concept; measurements relating to the total economy and various sectors are based on the net output per man-hour concept. These indexes are influenced by the divergent movements of various industries which make up the total, as well as by changes in the relative importance of these components.

Labor turnover.—Labor turnover rates are published monthly in the Monthly Labor Review and in Employment and Earnings for over 220 industries on the basis of reports from cooperating establishments employing over 10 million workers (about 55 percent of the universe surveyed). Labor turnover data are available on a monthly basis from January 1930 for manufacturing as a whole and, from January 1958, for individual industries and industry groups.

Work stoppages.—Statistics on strikes are compiled by BLS and include stoppages, workers involved, and man-days of idleness. Basic data are obtained from the employers and unions involved in strikes. Knowledge of strikes comes from a variety of sources, including newspapers, State employment services, and State and Federal mediation services. The Bureau presents annual reports in the Monthly Labor Review and later, in bulletin form, giving totals for each month of the year and analysis of strikes by industry, State, city, causes, and other classifications.

Historical statistics.—Tabular headnotes provide cross-references, where applicable to Historical Statistics of the United States, Colonial Times to 1957. See preface.

No. 543. Labor Force and Participation Rates, 1960 to 1973, and Projections to 1990, by Race, Sex, and Age

[Persons 16 years old and over. Annual averages. Rate is based on total population as of July and represents the proportion of each age group in the labor force (employed, unemployed, or in the Armed Forces). Projections based on trends in labor force participation rates between 1947 and 1973]

Includes persons who had a job or business, but did not work at all during entire survey week because of illness, bad weather, vacation, industrial dispute, or various personal reasons, not shown separately.

### No. 563. Nonagricultural Establishments—Employees and Average Weekly Hours: 1950 to 1974

[Prior to 1960, excludes Alaska and Hawaii. Includes all full- and part-time employees who worked during, or received pay for, any part of the pay period reported. Excludes proprietors, self-employed persons, farmworkers, unpaid family workers, domestic servants, and Armed Forces. Data are annual averages adjusted to March 1972 benchmark levels indicated by data from government social insurance programs. See *Historical Statistics*, Colonial Times to 1967, series D 48-56, for related data]

## No. 566. Nonagricultural Industries—Number of Employees, 1960 to 1973, and Number and Earnings of Production Workers, 1965, 1970, and 1973

[Covers all full- and part-time employees who worked during, or received pay for, any part of the pay period including the 12th of the month. For mining and manufacturing, data refer to production and related workers; for contract construction industries, to employees engaged in actual construction work; and for other industries, to nonsupervisory employees and working supervisors. See also headnote, table 563. "N.e.c." means not elsewhere classified. See Historical Statistics, Colonial Times to 1967, series D 48-56, D 626-641, and D 669-684, for related but not comparable data]

Source: U.S. Bureau of Labor Statistics, Current Wage Developments, March 1973.

<sup>&</sup>lt;sup>1</sup> Covers the period between June 1968 and March 1973. For further details, see National Survey of Professional, Administrative, Technical, and Clerical Pay, Bulletin No. 1804.

<sup>2</sup> Derived from gross hourly earnings by assuming that overtime paid for at rate of time and one-half.

<sup>3</sup> Covers cities with 1970 population of 100,000 or more.

<sup>4</sup> Covers July 1967-April 1972. Basic salary scales reflect only statutory changes in salaries. Average salary rates show statutory changes and the effect of changes in the proportion of workers at each step within the salary ranges for individual grades. Average salaries measure the effect not only of statutory changes in basic pay scales and in-grade salary increases, but also changes in the proportion of workers in various grades.

### No. 581. Median Annual Earnings of Civilians, by Sex and by Occupation: 1962 to 1972

[In dollars. Covers persons 14 years old and over as of March of following year. Earnings are for year-round fulltime workers. Based on sample; see text, p. 1. For definition of median, see preface]

### No. 582. Percent Increase in Average Salaries for Selected Occupations in Private Industry: 1968 to 1973

[Excludes Alaska and Hawaii. Relates to establishments employing 250 workers or more in metropolitan areas and nonmetropolitan areas. Minimum employment was at 250 in manufacturing and retail trade industries, 100 workers in wholesale trade, services, and transportation, communication, and other public utilities; and 50 workers in finance, insurance, and real estate industries. When changes were made in survey coverage, year-to-year percent changes were based on data adjusted to represent same coverage in both years. Based on sample and subject to sampling variability]

### No. 584. Percent of Workers Employed in Establishments Having Formal Provisions for Selected Supplementary Wage Benefits, 229 SMSA's: 1972

[Surveys relate geographically to the 229 standard metropolitan statistical areas in the United States, as established by the U.S. Office of Management and Budget through Jan. 1968. Data for half of the areas surveyed relate to late 1971 and early 1972; for the remainder, to late 1970 and early 1971. Data obtained from sample of establishments which employ 50 workers or more, except in 12 of the largest areas where the minimum size was 190 employees for manufacturing, public utilities, and retail trade; see source. Excludes povernment institutions, and construction and extractive industries. Excludes administrative, executive, and professional employees]

### No. 592. LABOR UNIONS-FINANCIAL SUMMARY, BY TYPE OF UNION: 1966 TO 1972

[For fiscal years ending during calendar year. Data from annual financial reports of labor organizations filed with Department of Labor under provisions of Labor-Management Reporting and Disclosure Act of 1959 (LMDRA) which covers substantially all labor unions in the United States, except those which are State or local central bodies. Classification by type is based mainly on union's self-classification in filed reports]

X Not applicable.

<sup>1</sup> State has a right-to-work law.

<sup>&</sup>lt;sup>2</sup> Includes Dist. of Col.

<sup>&</sup>lt;sup>1</sup> Workers counted more than once if involved in more than 1 stoppage during year.
<sup>2</sup> In 1967, total employed workers were redefined to coincide with the U.S. Bureau of Labor Statistics figures for nonagricultural employment, plus agricultural wage and salaried workers. Idleness computed on this basis is lower than the former series.

<sup>3</sup> Estimated working time computed by multiplying average number of employed workers (see footnote 2) by number of days worked by most employees.
